

Active without pressure – compact and powerful: The Clamping and Braking Element with spring-loaded energy storage UBPS

The UBPS series is based on a dual-effective wedge slide gear with spring-loaded energy storage for clamping and braking without pressure. This arrangement of three pistons connected inline allows the use of a stronger spring at 5.5bar. The stronger spring-loaded energy storage permits holding forces up to 9,200N. Positive fit contact sections mounted within a strong casing guarantee high axial and horizontal rigidity.

The UBPS series is designed for braking on linear guides. Because of the material combination of the linear guide/contact section, the linear guide won't be damaged by the contact section.

In order to exclude damage from contamination with chips (chips between contact section and linear guide), the elements can be fitted with original seals (seal kit) from the respective linear guide

manufacturer and longitudinal seals as accessories. When used in harsh work environments or with cooling liquid, the seal kit should be used as well. In order to guarantee the lifetime of the seals, follow the corresponding instructions from the respective linear guide manufacturer. Details on the length of the brake path to be expected can be obtained from our technical advisors. The computations are based on serial tests and our industrial experience.

UBPS Series

Technical data for UBPS series:

Rail size	20–65
Holding forces	1,500 N–9,200 N
Min. pressure	5.5 bar
Max. pressure	8 bar
Spring-loaded energy storage	✓
PLUS connection	✓
Clamping cycles	5 mil. (B10d-value)*
Braking cycles	2,000

Application scenarios for UBPS:

- Clamping in case of pressure drop
- Clamping without energy requirement
- Emergency OFF function
- Braking for linear motors
- Z-axes positioning in neutral position
- Machine table clamping of work centres

Connection options for UBPS:

The basic version of the UBPS series features air connections on both sides. This means that the air connection and the air-release filter can be moved over to the opposite side.

Higher supporting forces with PLUS connection:

By using a 5/2(overflow-free) or 5/3 valve it is possible to support the spring power with pneumatic pressure. By using the PLUS connection, the stated supporting force will be increased.

When the PLUS connection is being used the air-release filter is replaced by connecting a second pneumatic tube (see drawing).

For further information, please refer to the assembly instructions or visit www.zimmer-gmbh.com.

*Note: With PLUS connection, the B10d value is not achieved.

Seal kit accessories for UBPS:

Seals are recommended in harsh work environments. The element is also available with CE certification.

Adapting plate accessory for UBPS:

Depending on the height of the carriage (measure D), an additional adapting plate is required (see table from page 84).

X: not feasible

^{*1} Supplements the measure table and datasheet

^{*3} Long version UBPS

See page 11 for part number explanation

Rail manufacturer
HIWIN
Lineartechnologie

Note: Consider measurement C/Interfering contour!

Comment:

The air filter is not necessary if the PLUS-connection is being used. Air connections are located on both sides and can be exchanged according to mounting requirements. Only one connection is necessary for function.

① Adapting plate PUB (accessory)

② air filter
